

Description

Eigen is an Industrial IoT software company that works with the top OEM and Tier 1 manufacturing companies in the world. Our advanced analytics and machine learning platform helps manufacturers refine their processes, predict outcomes and ultimately increase the value of their organizations.

We are looking for a creative and talented Front-end Developer with a passion for designing and developing scalable, high-performing, and mobile-first web applications to join our software team.

You will work with our other software component teams to enhance our platform offering to bring real-time data and the power of machine learning to our customers.

Responsibilities

- Design and deliver new features to enhance the user experience of our Vue.js application
- Design and implement slick and performant user interfaces
- Use the latest technology and open source libraries
- Work closely with Back-End and Machine Learning teams
- Influence the design and flow of the interface while delivering a responsive experience to all devices.
- Design, build, test and deploy. Our component teams are responsible for the complete life cycle.

Requirements

- 2 years of experience building web applications.
- Exposure and experience in common web frameworks like React or Angular
- Experience in Vue.js and Electron is an asset
- Experience in OO JS, D3, HTML, SCSS, JSON, JWT
- Exposure to and experience in REST API design principles
- Degree in Computer Science, Software Engineering or equivalent experience
- Experience in Git, Atlassian, Linux, BrowserStack, automated testing and Scrum is a plus.

We are a young company, operating at an aggressive and fast pace, with innovative self-starting individuals. We have a very flat organization, and our team operates on a high level of autonomy and trust. We balance our hard work with a relaxed and fun company culture.
